Research: Anna Surman

# Find Out More

**Balloon flowers** are part of the Bellflower/Campanula family. They are easy growing perennial plants that are deer resistant. Balloon flowers are native to China, Korea, Japan, and Russia. Their flowers can be blue, purple, pink or white.

The **beech tree** is native to Europe, Asia, and North America. It has a lifespan of 150 to 400 years. The beech tree also has very soft bark that can be easily carved into. As a result, you can often find the people's initials carved into the bark of this tree.

**Black-eyed Susans** are a type of flower that are native to North America. They grow from June to October and get their name from their dark, brown centers. They also attract butterflies, bees, and many other pollinating insects.

The grey **catbird** is a type of bird native to North America. Its plumage is entirely grey, something that no other bird native to North America has. It also has a bird call that sounds similar to a cat's mew.

The **chaste tree** is part of the *lamiaceae* or mint family. It is native to the Mediterranean and can grow up to 20 ft tall. The chaste tree has clusters of purple flowers that are called panicles.

**Ferns** are a type of non-flowering plant. There are over 12,000 different types of ferns. Most other plants reproduce with seeds. However, ferns do not and instead reproduce with spores.

**Honey bees** are pollinators and are crucial to helping plants grow. Honey bees produce honey to use as a food source in the winter. However, they produce two to three times more honey than the need, which leaves a lot of extra honey for people to eat.

**Sketch your favorite place or thing in the garden**

MHHM receives operating support from the W. Parsons Todd Foundation, the New Jersey Historical Commission, a division of the New Jersey Department of State and the F.M. Kirby Foundation and project support from The Astle-Alpaugh Family Foundation, the Garden Club of Morristown and The Rotary Club of Morristown.
