## Find Out More

**Black Locust** (*Robinia pseudoacacia*) Black locust and honey locust trees are the two most popular locust trees in the United States. The honey locust usually has thorns on the branches. The leaf has 7 to 21 leaflets.

**Snowbell** (*Styrax japonicas*) is native to China, Japan, and Korea. It produces flowers in late spring with white bell-shaped flowers made up of five petals. It has an oval leaf that may turn orange or yellow before dropping in the fall.

**Tea Viburnum** (*Viburnum setigerum*) is also native to China. The word tea was added to its name because monks living on Mount Omei (Emei) in China made tea by steeping its leaves. There are about 18 types of viburnum native to North America.
